

Company Overview

MARITIME AI PLATFORM IN DEVELOPMENT · CREW COMPLIANCE · STCW & MLC 2006 INTELLIGENCE

THE PROBLEM

Compliance Is Still Manual

Most fleet operators manage STCW certificates, crew rotations, and MLC 2006 audits through spreadsheets and reactive processes. A single missed certificate expiry can trigger a Port State Control detention — bringing significant costs in delays, port fees, and lasting reputational damage. The tools to prevent this exist in other industries. They are only beginning to emerge in maritime.

"I have stood on vessels where one expired certificate could ground the entire operation. Maritime compliance deserves better tools — built by people who have actually lived the problem. That's why I'm building this."

— Razvan Cioromela, Founder & Staff Chief Engineer

THE PLATFORM

Built Around Intelligent Agents

888 AI Systems is being developed as a maritime AI operating layer, starting with the compliance-critical functions of crew management.

AI CV & Certificate Intelligence

Designed to parse seafarer CVs and extract certificates of competency and crew documentation automatically, validating against flag state and issuing authority requirements.

STCW & Medical Expiry Radar

Designed to surface certificate and medical expiries before they become operational risks, cross-referencing issuing authorities and flag state endorsements.

Dynamic Crew Complement Scales ROADMAP

Real-time monitoring of safe manning requirements fleet-wide, with 90/60/30-day expiry alerts and a full MLC 2006 audit trail.

ABOUT THE FOUNDER

Razvan Cioromela — Founder & Staff Chief Engineer · CoC Unlimited

The founding insight came from direct personal experience. As a seafarer applying for opportunities worldwide, Razvan observed AI-powered certificate processing emerging in yacht recruitment — a small but telling signal. The same intelligence, built with full STCW and MLC 2006 compliance logic at fleet operator level, could fundamentally change how maritime companies manage their most critical asset: their crew. None had built it from the engine room up. So he started.

EXPERIENCE: 16+ years — Cruise, Expedition, LPG, Container, Ferries
ROUTES: Worldwide
COC: Chief Engineer — Unlimited
CERTIFICATIONS: Basic Training, Advanced Fire-Fighting, Medical Care, HELM, High Voltage, Security Awareness, Fast Rescue Boats, Survival Craft, Diesel-Electric Propulsion, Engine Resource Management

WHO IT'S FOR

Fleet Operators & Ship Management Companies · Crewing Managers & DPAs · Manning Agencies

WHY NOW

The Window Is Open

Port State Control enforcement is intensifying globally. MLC 2006 amendment cycles are accelerating. The fleet operators who shape compliance automation early — by working with the people building it — will hold a lasting operational advantage over those still relying on spreadsheets. 888 AI Systems is being built now, by someone who has lived the problem firsthand.

TECHNOLOGY & APPROACH

- EU-hosted infrastructure, GDPR-compliant
- Seafarer data encrypted at rest and in transit
- Designed to work alongside the crewing systems you already use
- Built for fleets of 1 to 50+ vessels

THE ROADMAP — BEYOND CREWING

- Technical Management & PMS automation
- ISM & Safety Compliance monitoring
- Port State Control risk prediction
- Fleet-wide workforce performance analytics

FOUNDING PARTNERS — NOW WELCOME

888 AI Systems is inviting fleet operators to get involved early — to shape what gets built and hold founding-partner position as the platform develops.

Book a 30-minute call with the founder to discuss your fleet's compliance challenges.
