

Platform Vision & Founding Partner Programme

888 AI Systems is a pre-launch maritime AI platform in active development, currently inviting fleet operators to get involved as founding partners.

FOR FLEET OPERATORS & INDUSTRY PARTNERS

THE PROBLEM NO ONE HAS SOLVED AT SCALE

The Compliance Gap in Maritime Fleet Operations

Maritime fleet operations run on compliance. Every vessel departure depends on certified crew, valid STCW endorsements, correct complement scales, and MLC 2006 documentation. Yet in 2026, most fleet operators still manage this through spreadsheets, manual certificate cross-checking, and reactive processes that only surface problems after they become expensive.

A single missed certificate expiry can trigger a Port State Control detention — bringing significant costs in delays, port fees, and lasting reputational damage. A crew rotation error can ground a vessel. An MLC audit failure can halt operations fleet-wide.

The tools to prevent this exist in other industries. They are only beginning to emerge in maritime.

THE FOUNDING INSIGHT

Built From the Engine Room Up

888 AI Systems was founded by Razvan Cioromela, a Staff Chief Engineer with 16+ years of sea service across Cruise, Expedition, LPG, Container, and Ferry vessels.

The founding insight came from direct personal experience. As a seafarer applying for various job opportunities, Razvan observed AI-powered certificate processing beginning to emerge in yacht recruitment. A small signal, but a telling one. The same intelligence, applied at the fleet operator level with full STCW and MLC 2006 compliance logic, had the potential to fundamentally change how maritime companies manage their most critical asset: their crew.

None had built it from the engine room up. So he started.

WHY NOW

The Window Is Open

Port State Control enforcement is intensifying globally. MLC 2006 amendment cycles are accelerating. Flag states are tightening certificate validation. The fleet operators who shape compliance automation early — by working with the people building it — will hold a lasting operational advantage over those still relying on spreadsheets. 888 AI Systems is being built now, by someone who has lived the problem firsthand.

THE PLATFORM

What 888 AI Systems Is Building

888 AI Systems is being developed as a maritime AI operating layer — starting with the compliance-critical functions of crew management, and designed to expand across every operational domain where shore teams and vessel operators need faster answers, better tools, and fewer manual processes.

The platform is being built around intelligent agents:

AI CV & Certificate Intelligence

Designed to automate CV parsing and certificate extraction, with crew-vessel matching based on sea-time, engine types, vessel class, and STCW endorsement status — built to remove the manual administrative burden that consumes shore-team hours today.

STCW & Medical Expiry Radar

Designed to surface certificate and medical expiries before they become operational risks, cross-referencing issuing authorities and flag state endorsement requirements.

Dynamic Crew Complement Scales **DEVELOPMENT ROADMAP**

Real-time monitoring of safe manning requirements across the fleet, with fleet-wide STCW and Medical certificate tracking, automated expiry alerts at 90, 60, and 30 days, and a full MLC 2006 audit trail.

TECHNOLOGY FOUNDATION

Infrastructure & Approach

- EU-hosted infrastructure, GDPR-compliant
- Seafarer personal data encrypted at rest and in transit
- Designed to extract and validate certificates of competency and crew documentation across STCW endorsements (II/1, II/2, III/1, III/2 and beyond)
- Designed to cross-reference issuing authorities and flag state endorsements
- Designed to work alongside the crewing systems you already use
- Built for fleets of 1 to 50+ vessels

THE ROADMAP

Beyond Crewing — The Full Intelligence Layer

888 AI Systems is designed as an expanding intelligence layer, not a point solution. The roadmap includes:

- Technical Management & PMS automation
- ISM & Safety Compliance monitoring
- Port State Control readiness prediction
- Vessel Performance Analytics
- Crew Fatigue & Hours Monitoring (MLC 2006)
- Operational Document Intelligence

Each module is designed to connect to the same fleet intelligence layer — one system, full visibility.

ABOUT THE FOUNDER

Razvan Cioromela — Founder & Staff Chief Engineer

Razvan is building 888 AI Systems from sixteen years of direct experience inside the systems it is designed to improve. He holds a Chief Engineer Unlimited Certificate of Competency, having worked his way from cadet apprentice through every engineer rank up to Staff Chief Engineer — including the watchkeeping duties at the heart of vessel operations. His career spans cruise vessels, expedition ships, LPG carriers, container vessels, and ferries, with the past decade focused on cruise and ferry operations and the most recent years in the Staff Chief Engineer rank. Every line of the platform's compliance logic is grounded in what he has seen work, fail, and slip through the gaps at sea.

CREDENTIALS

CERTIFICATE OF COMPETENCY: Chief Engineer — Unlimited

EXPERIENCE: 16+ years sea service across Cruise, Expedition, LPG, Container, and Ferries

ROUTES: Worldwide

CERTIFICATIONS: Basic Training, Advanced Fire-Fighting, Medical Care, HELM, High Voltage Certificate, Security Awareness, Fast Rescue Boats, Proficiency in Survival Craft, Diesel-Electric Propulsion, Engine Resource Management

FOUNDING PARTNER PROGRAMME — GET INVOLVED EARLY

888 AI Systems is inviting fleet operators who want to shape the platform as it's built and hold founding-partner position when it launches.

- Direct input into product development and feature prioritisation
- Priority onboarding when the platform launches
- Founding-partner pricing
- A dedicated 30-minute conversation with the founder

888 AI Systems also welcomes integration and distribution enquiries from manning agencies, ship management companies, and maritime software providers.
